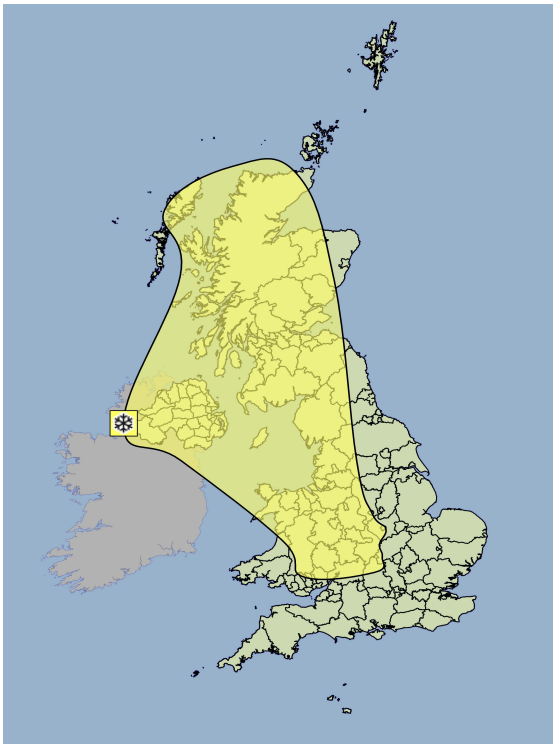
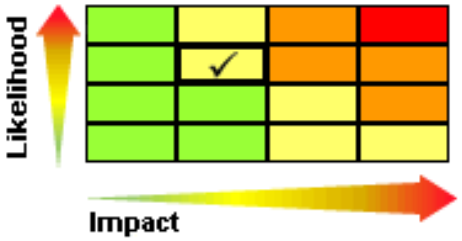
National Severe Weather Warning Service





Chief Forecasters Assessment
Following the eastwards clearance of the frontal system on Tuesday, a cold and unstable westerly airstream is expected to follow across many parts of the UK which will persist through Tuesday night into early Wednesday. This will bring snow showers with accumulations in places.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **14:15 on Tue, 11th Feb 2014** until **10:00 on Wed, 12th Feb 2014**

Showers will turn increasingly to snow on Tuesday, even down to low levels, and will continue through Tuesday night. Snow showers will continue into Wednesday morning in the north. Accumulations of 2-5 cm are likely on ground above about 150-200 m with perhaps 10 cm or more above 300 m especially in the west of Scotland, Northern Ireland, northern England and Wales. On low ground, lying snow will tend to melt between showers by day but 1-3 cm may settle on Tuesday evening and night. Icy stretches will also form in the evening, these lasting well into Wednesday morning in the north.

The public should be aware of the risk of some travel disruption and difficult driving conditions. This is an update to the warning issued yesterday, to include more of Wales and central England.
